The Honorable Roy Blunt
Chair
Appropriations Subcommittee on
Labor, Health and Human Services,
Education, and Related Agencies
United States Senate
Washington, D.C. 20510

The Honorable Patty Murray
Ranking Member
Appropriations Subcommittee on
Labor, Health and Human Services,
Education, and Related Agencies
United States Senate
Washington, D.C. 20510

The Honorable Rosa DeLauro
Chair
Appropriations Subcommittee on
Labor, Health and Human Services,
Education, and Related Agencies
United States House of Representatives
Washington, D.C. 20515

The Honorable Tom Cole
Ranking Member
Appropriations Subcommittee on
Labor, Health and Human Services,
Education, and Related Agencies
United States House of Representatives
Washington, D.C. 20515

Dear Chairman Blunt, Chairwoman DeLauro, and Ranking Members Murray and Cole:

The undersigned groups are committed to ensuring that our nation's children receive quality, appropriate healthcare. A key means of achieving this objective is through laboratory tests that provide objective data to healthcare professionals for evaluating the health status of their young patients.

When making a diagnosis, the healthcare professional evaluates a laboratory test value within the context of a reference interval – a range of numeric values that would be expected in a healthy child. If the test result falls outside of the reference interval – either higher or lower – the healthcare professional may order a medical intervention to address the condition. If the diagnosis is mistaken for any reason, including a faulty reference interval, the result could be harmful for the young patient. Therefore, it is critical that reference intervals be correct.

Whereas reference intervals for adults are generally reliable, there is considerable inconsistency and large gaps in the ranges provided for children. It is imperative that reference intervals accurately reflect the physical development of patients from birth through adolescence to adulthood. Accurate and actionable reference intervals are particularly important for our youngest patients, who are often unable to verbally communicate their symptoms. Unfortunately, most laboratories are unable to obtain enough samples from healthy children to develop their own accurate pediatric reference intervals (PRIs).

Fortunately, the Centers for Disease Control and Prevention (CDC) has the infrastructure in place to address this problem. Its Environmental Health Laboratory (EHL) could generate the needed reference intervals with clinical samples obtained from its National Health and Nutrition Examination Survey (NHANES). EHL has experience developing reference intervals for chronic disease biomarkers in adults and NHANES has the infrastructure and expertise to collect the requisite specimens from healthy children. Congress recognizes the critical role the CDC can play in addressing this issue.

In December 2019, the House and Senate passed, and the President signed into law, the Further Consolidated Appropriations Act of 2020. In the accompanying report language, the two chambers identified improving pediatric reference intervals as a key priority, requesting that the CDC develop and

submit a plan to Congress for improving PRIs. In order to advance this important initiative, we recommend that Congress provide the CDC Environmental Health Laboratory with an additional \$10 million in FY 2021 to initiate and advance this vital work.

The undersigned groups stand ready to be an ongoing resource to members of Congress on improving pediatric reference intervals and ensuring quality care for our country's children. We appreciate your consideration on this matter.
